

We Feature the most advanced security in the world

The Facts

Today's objectives required increased security against unauthorized access and controlled access. Many security measures are in place such as video cameras (24/7 surveillance), biometric identification mechanism such as retina scan and fingerprint scan.

The problem

The today's security measure proved to not be enough against creativity of the people who try to break in. Someone smart enough and armed with necessary tools may be able to craft some plans to gain unauthorized access.

The solution

We crafted one of the most advanced security measures in the world, applicable to high risk objectives.

Scenario

We have this bank vault secured by our new security features. Only one person is entitled to gain access to the vault. Someone captures the person and, by use of force, brings him at the vault to perform authentication, so to gain access.

Surprise

It doesn't work, even if the thieves managed to really shutdown the surveillance cameras, and control other parameters, they will NOT

The retina scan can be tricked, also voice recognition and other methods.

"Not Anymore" - Mugurel Dragusin

be able to gain access EVEN if they have in their custody, the only person that can gain access.

This how secure our security features are!

Contact Us

We can assist you in featuring your security system with this new technology. Remember, we provide the information only, your own chosen contractors may perform the job.
